To clone the repository to your local machine:
1. In your terminal, cd into the directory you want to have the repo.
2. Type "git clone https://github.com/hniu/project2.git"

Useful git commands (use when in the git repo):
- *git pull:* pulls down the most recent version from the repo
- *git add "filename":* adds the file to the next commit
- *git add . :* adds all the files with edits to the next commit
- *git commit -a -m*: commits your changes, you write a message of the changes you made
- *git push:* pushes commits to the server so others can pull them down

Summary (4-step process):
- git pull
- git add .
- git commit -a -m
- git push
